Anti-Jemmy Strips

An **Anti-Jemmy Strip** is a metal strip for Doors fitted to the lock edge of outward opening doors. This security measure is to prevent the door from being prised open.

Anti-jemmy strips are designed to cover over the area that the door closes into effectively denying access to the gap between the door and the jamb.

Anti-jemmy strips can either run the full length of the door (recommended) or made to just protect around the locks.

Round headed coach bolts are used to secure the anti- jemmy strip to the door and secured on the inside with washers and dome nuts.

Each anti- jemmy strip is custom made to allow for locks and handles and the relevant cut outs are prepared prior to powder coating and fitting.

Anti-Jemmy strips can be flat, or if needed they are folded for a better fit on the jam.

The anti-jemmy strips can be optionally powder coated steel, aluminium or stainless steel.

- Visual deterrent
- Door edge and jamb protection
- Lock protection
- Prevents door being pried open
- Maintenance free
- Caters for all door styles
- Powder coated
- Tamper proof bolt heads
- Insurance approved
