

## EXTRA LOCKS

XPANDASTRONG

### **Additional Locks - Make your Existing door stronger**

Xpanda security supplies various types of locks that can be fitted to aid the security of a door. It is becoming more obvious that the standard door lock is no longer sufficient and to improve security, additional High Security locks need to be installed.

Some available options are:

**Deadbolt:** When locked a thick pin passes from the lock mechanism into the jamb. It is very difficult to force this lock open. Two of these locks on a door is good security.

**ADI locking bolt:** The most common fitment is one ADI bolt at the top and one ADI bolt at the bottom of a single door, or a different format used to secure two side by side (double) opening doors together. A common addition is to also add two ADI locking bolts top and bottom.

If fitted on a Fire exit it is an option to have a thumb-turn on these (if inside on a solid wooden door or glass door with steel mesh)

*ADI5004 (Slimline)*

*ADI444-DD (Double Door)*

*ADI444-RMSC*
