Steel Mesh Screens - Doors or Windows

Xpanda manufactures customised steel mesh screens to add extra protection for entrance doors or windows, Usually needed for fire-exit doors with a thumb-turn lock, or because of the stylish appearance. They are often used for other applications requiring a mesh type finish such as steel cages for machinery or lock ups.

Frames are first manufactured to fit the application taking into account locks, handles and door closers in the case of external doors, or the type of accessibility required in the case of machinery enclosures.

Once the frame is welded then the mesh is cut to suit and welded onto the frame. Mounting plates and holes are all pre drilled to ensure the quick installation of the finished products. Steel mesh products are then sent to either galvanising or powder coating depending on the client's requirements prior to installation. The installation is then a quick process with the minimum of inconvenience.

Strong and Secure Protection

Our steel mesh screens are built to be extremely strong and durable, making it nearly impossible for any determined burglar to gain entry into your property. You can have peace of mind knowing that your property is well-protected with our steel mesh screens.

Does mesh work?

If you choose steel over aluminium offered by other companies yes it does.

Mesh takes considerable time to get through, making it difficult for burglars to break in. Furthermore, the sight of the mesh serves as an immediate deterrent, dissuading criminals from targeting your shop. Burglars tend to avoid shops that appear to lack even basic security measures.

Therefore, having steel mesh is likely to discourage them from attempting a break-in altogether.

Why Choose Steel Mesh for Security?

They make it difficult for intruders to enter a building by breaking or opening a door, especially fire exits.

They are an effective way to deter criminals.

They give business owners peace of mind that their property is safe.

They are a highly aesthetically pleasing.

They are designed to the specifics of each structure.

They can be powder coated to many different colours, they won't stand out or seem out of place.
