Steel Safety Cage for shops

The Xpanda Steel Safety cage for shops is fully custom built to suit shop counter applications to protect staff against increasing daytime attacks. All steel construction using 50mm square tube for the frame, 25mm for the bar frames, and 12mm steel round bars at 125mm centres. Designed entirely around your shop counter with features like lockable serving hatches wherever you need them.

A Steel mesh gate features a fire-exit compliant thumb turn lock from the inside, shielded from the outside so you remain safe inside while police are called. These security bars are typically installed with the bars running horizontally but vertical bars can be done depending on requirements.

Dulux Powder-coating colours are also available, while we recommend the colour in our photographs as it is the least intrusive to customers.

Burglars tend to target shops that appear to lack even basic security measures. Therefore, having a protected counter is likely to discourage them from attempting a robbery altogether.

Why Choose a Steel cage for Safety?

Much much stronger than tensioned wire type.

An effective way to deter criminals.

Peace of mind that staff are safe.

Practical and aesthetically pleasing.

Designed to the specifics of each shop.

Powder coated to many different colours,

They won't stand out or seem out of place.
