## Solid Steel Doors - Light Duty

**Xpanda solid steel light-duty doors** are an alternative to our heavy duty version security doors but are still no compromise when appropriate to the application.

The door is built on a 40mm square welded tube frame with cross bracing, complete with 50mm steel angle or similar sub frame surround, hung from stainless steel security hinges, with a riveted galvanised 1.95mm solid steel faceplate, bolted 100 x 6mm aluminium anti jemmy strip, and riveted galvanised 1.55mm steel back plate.

Each door is supplied with commercial Deadlock but various locking options from code locks to deadbolts can be fitted during the manufacturing process, depending on client requirements.

Hinge protection pins are welded on the hinged side of the door. These pins locate into the jamb frame when the door is closed. Should the hinges be tampered with the door cannot be forced open on the hinged side because of these pins.

The steel door units can be fitted into existing blockwork or timber door apertures as all doors and frames are custom built.

The frames are zinc plated for corrosion resistance and sheets are pre-galvanized, and Powder coating is optional to any Dulux Powder coating colour.
