Steel Bar Doors and Gates

Xpanda manufactures steel bar gates and doors to suit individual requirements and measurements. All steel gates and frames are fully welded for strength against forced entry. Sentry Bar doors are constructed from a 40mm square tube frame surround, complete with sub frame, hung from anti-tamper hinges, with welded 16mm solid steel bars, and anti jemmy lip.

The Sentry door is supplied with a dead lock, hot dipped galvanized for corrosion resistance.

Our range includes pedestrian as well as driveway gates and there are few limitations as to what we can make.

We also provide hinged or sliding options and also different locking options.

Bar doors can be customized with serving hatches (below) or with Laser cut logos (right).

Powder coating is also available in a range of colours to suit your individual environment.
