Mobile Expandable Barriers - Rollerguard Mobile

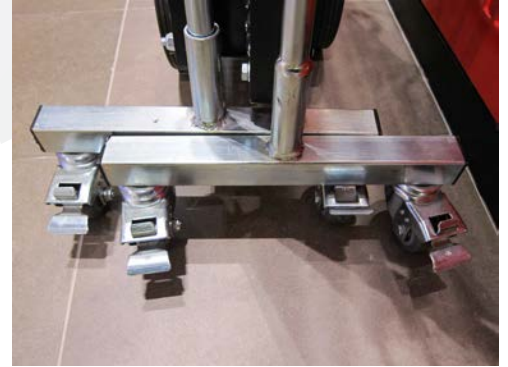

By adding a trolley system to our regular barrier, the Xpanda Rollerguard becomes a mobile pedestrian barrier. It has many beneficial applications in that it is not restricted by being fixed to a structure, although it can, if required. The Rollerguard trolley system is light-weight and allows for complete mobility and versatility. It can be moved to cordon off areas, or stored when not required. It can be joined together with other Rollerguards and have different lockable configurations.

Common uses include the temporary securing of areas in Malls, construction sites and areas where temporary cordons are required to be provided.

This barrier is used to cordon off areas where public access needs to be restricted for either security or health and safety reasons. Made of durable aluminium square tubing constructed in a concertina configuration, that can be either 1,5m or 2,0m high and is fitted with castor wheels for easy operation.

The Rollerguard can be locked through a drop catch (that is supplied with every system) on the other end.

Expandable Barriers can be powder coated in colour of your choice.

Features:

- Made in New Zealand
- Available as Supply-and-install or Supply-Only
- Fully assembled with Wall mounting brackets.
- Light in weight
- Can be rolled out of the way to storage
- Steel drop latch for locking purposes (small padlock can be used)
- Aluminium square tubing
- Powder coated to any Dulux Powder-colour (although some do cost more than others).
- Swivel castor and brake on lock post end for ease of motion and stability.

Specifications:

- Solid 200mm rubber wheel in centre of barrier, acting as stability (on barriers more than 4m wide)
- Heights 1.5M & 2M
- Compacts down to 10-15% of its original size.
- Swivel castor is foot lockable
