

Saftidor Mobile Grille

Safe Handling of Mobile Units

✓ Push at a steady walking pace.

✗ Do not push on ramps

✓ Always push

IMPORTANT – Please Read Before Operating

The Saftidor Mobile Trolley System is a tall, heavy barrier designed for flexible use in indoor environments. Units may weigh up to 100 kg. The system must be operated with care to prevent injury or damage.

SAFETY FIRST

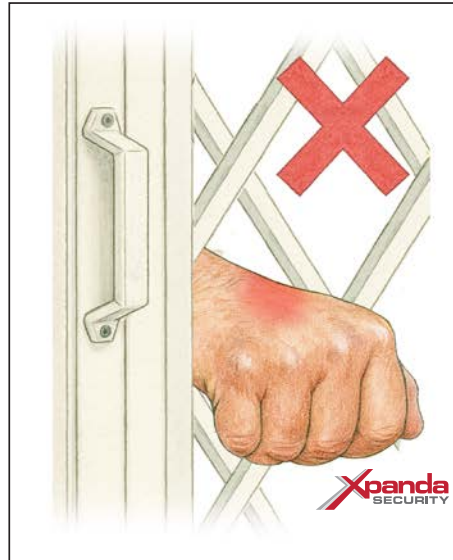

- Inspect before use – Check the unit for damage or obstruction before operating.
- Only trained staff to operate – Never allow children or the public to move or deploy the barrier.
- Always push, never pull – Operators must have a clear view of the barrier at all times.
- Only push or hold the stile ends.
- For larger or taller systems, two people should move the unit for stability and safety.
- One operator may compact or deploy the lattice if done steadily and under control.
- Floor conditions – Designed for flat, smooth indoor floors only. Do not attempt to move across slopes, Ramps, or uneven ground.
- Obstacles – Watch for door sills, floor mats, or bumps that can stop wheels suddenly and risk tipping.
- Speed – Move at a steady walking pace. Do not jerk, ram, or push aggressively.

WARNING: Forcing the grille when resistance is felt can cause it to tip over, which may lead to injury.

CARE & FUNCTION

- Report Damage Early – Small faults left unchecked can lead to costly repairs.
- Secure in Transit – Tie a bungee cord around the folded grille when moving it to prevent opening.

Saftidor Mobile Grille General Lattice Safety & Care

✓ Hold Correctly = No Injuries

✗ Hold Lattice = Jammed Fingers

IMPORTANT – Please Read Before Operating

To avoid damage to the grille and prevent injury to yourself or others, follow the instructions below. Incorrect use is the main cause of breakage, and repairs can be costly and time-consuming. Proper use ensures your grille will last for many years, with minimal maintenance, and without injury.

SAFETY FIRST

- Inspect before use – Check for obstacles or bystanders before operating.
- Always hold the fitted handle when operating – This is the only safe place to grip.
- Keep hands clear of the lattice – Pinch hazards exist in the scissor-action bars.
- Use steady, controlled movement – Never slam, force, or jerk the grille when opening or closing.

WARNING: Forcing the grille when resistance is felt can cause sudden breakage, which may lead to injury.

DAMAGE PREVENTION

- Flat, even surfaces – Door mats, mat wells, or uneven ground can affect operation and reduce product life.
- Stop if you feel resistance – Resistance means something is out of place.

CARE & FUNCTION

- Shoot-bolt holes – Check and clear periodically so bolts engage reliably.
- Castors / rollers / Lock Mechanism – Apply CRC Dry-Glide as needed to maintain smooth movement.

✓ Clear Debris = Secure locking

✓ Lubricate parts = smooth movement
